### **DETAILED ACTION**

1. This office action is in response to the Amendment filed August 29, 2008.

Accordingly, claims 1 and 9 were amended, and claims 3, 5, 6 and 11 were cancelled. Currently, claims 1, 2, 4, 7-10 and 12-24 are pending in this application.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

Claim 7: in line 1, after "the substrate has", delete "a" and insert --the--; and in line 2, after "black matrix under", delete "a" and insert --the--.

### ***Allowable Subject Matter***

3. Claims 1, 2, 4, 7-10 and 12-24 are allowed.

The following is an examiner's statement of reasons for allowance: none of the prior art of record fairly suggests or shows all of the limitations as claimed. Specifically,

Re claims 1 and 9, none of the prior art of record discloses, in combination with other limitations as claimed, an apparatus for forming a liquid crystal layer on a substrate as well a method of forming as the same comprising a projecting portion for emitting a liquid crystal material; a resonator for generating a vibration with only a specific frequency upon application of an on voltage to the resonator during emitting of

the liquid crystal material; a resonating plate located between the resonator and the projecting portion and outside of the projecting portion, the resonating plate vibrating with the same specific frequency and transmitting the vibration to the projecting portion so as to apply a pressure to the projecting portion to emit the liquid crystal material from the projecting portion onto a substrate, wherein the resonator, the resonating plate and the projecting portion are arranged in a direction perpendicular to the substrate; and a stage for moving the substrate in one direction during emitting of the liquid crystal material from the projecting portion uniformly onto the substrate, the substrate having a seal pattern and a black matrix at a region corresponding to the seal pattern, wherein the liquid crystal material is emitted from the projecting portion substantially in the same direction, which is perpendicular to the substrate as the resonator vibrates.

The most relevant reference, US 3,512,173 to D. E. Damouth, as shown in Fig. 1, fails to disclose or suggest that the resonator, the resonating plate and the projecting portion are arranged in a direction perpendicular to the substrate, wherein the substrate has a seal pattern and a black matrix at a region corresponding to the seal pattern and the liquid crystal material is emitted from the projecting portion substantially in the same direction, which is perpendicular to the substrate, as the resonator vibrates.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
